

Lab 3

DATA 202 - Alexander - Fall 2023

For Lab 3, you may submit your solutions to Canvas as a `.pdf` or an *R Script* or even as a `.txt` file.

Please see the *Preparing Lab Reports* at the bottom of the [lab 1](#) assignment.

Learning Objectives

The Lab 3 assignment focuses on you exploring any two variables located in one of the data frames that we have explored, with a preference for the `gssr` package over `gss_cat`. You will again return to some of the functions we have used before to clean variables and manipulate data frames.

Your analyses in this lab should focus on a *regression analysis between two variables*, one or both variables must be a numeric.

Please note: you should not use the same variables from a previous assignment but you may use the same data set.

Importantly, your analysis in lab 3 should inform the paper 3 assignment.
